WOODY™ XL

HUM CANCELING STACK®
WITH ADJUSTABLE POLE PIECES

Designed specifically for the discriminating acoustic player, the **WOODY™ XL** is the flagship of the **WOODY™** line. Its adjustable pole pieces, fully shielded Stack® construction, and optimized frequency response allow professional guitarists to tailor their sound to suit any musical situation. The acoustic sound is uncommonly rich and incredibly quiet for a magnetic pickup – even at ridiculous volume levels. You get clean, clear acoustic tone whether you're plugged into your favorite amp or a PA system.

Each **WOODY™ XL** is dual potted (wax and epoxy) to eliminate microphonic feedback and to ensure mechanical integrity and reliability. The heavy-duty studio quality 14' cable with its hand-soldered 1/4" plug provides a quiet, low capacitance and kink-free connection to your amp. An additional pole piece for unwound G string setup is included; we recommend that you replace the existing pole piece with the one provided for the best string-to-string balance.

The **WOODY™** is available in two other versions: the **WOODY™ SC**, a single coil model that sounds big, bright and balanced; and the **WOODY™ HC** our Hum Cancelling Stack®, with two fully-shielded coils in a special configuration for warm and even string response.

All this quality and performance is built into a beautiful hand-rubbed wood casing that easily pops into standard 3.75" (94mm) to 4" (100mm) soundholes! Instructions and the proper adjusting tool are included.
